Polypropylene BH975MO

Technical Data Sheet

BLOCK COPOLYMER FOR INJECTION MOULDING

DESCRIPTION

BH975MO is a heterophasic copolymer. This grade is characterized by optimum combination of very high stiffness, good flow properties and good impact strength.

Products moulded with this grade exhibit excellent antistatic performance and very good mould release.

BNT nucleation, in combination with excellent stiffness and good flow properties creates a high potential for wall-thickness reduction.

APPLICATIONS

Appliances White goods Pails Houseware

SPECIAL FEATURES

Excellent flow behaviour
Very good impact performance for low temperature applications
Good antistatic properties
Reduced cycle time and increased output

PROCESSING TECHNIQUES

BH975MO is easy to process with standard injection moulding machines.

Following parameters should be used as guidelines:

Melt temperature 200 - 250 °C

Holding pressure 200 - 500 bar Minimum to avoid sink marks.

Mould temperature 15 - 40 °C Injection speed High

Shrinkage 1 - 2 %, depending on wall thickness and moulding parameters

STORAGE

BH975MO should be stored in dry conditions at temperatures below 50°C and protected from UV-light. Improper storage can initiate degradation, which results in odour generation and colour changes and can have negative effects on the physical properties of this product.

More information on storage can be found in Safety Information Sheet (SIS) for this product.

SAFETY

The product is not classified as a hazardous preparation.

Please see our Safety Information Sheet (SIS) for details on various aspects of safety, recovery and disposal of the product, for more information contact your Borouge representative.

RECYCLING

The product is suitable for recycling using modern methods of shredding and cleaning. Inhouse production waste should be kept clean to facilitate direct recycling.
